System reinforcement in Euskadi

Red Eléctrica is starting extension work on the Abanto substation to strengthen supply and boost economic and industrial activity in Gipuzkoa.

The extension work is intended to strengthen the supply to the distribution network that provides power to companies in the surrounding area, such as the Abanto- Zierbena Technological Park.

Red Eléctrica is also working on a second extension project, currently in the final processing stage, for a demand position of a large industrial consumer in the area.

Red Eléctrica will be investing almost 3 million euros in the two extensions planned at the substation of Abanto.

Bilbao, 20 March 2025

Red Eléctrica, Redeia's company responsible for electricity transmission and system operation in Spain, has begun construction on the Abanto electrical substation, in Bizkaia, to bolster the electrical supply in an area of great economic activity.

Specifically, it involves the implementation of a new bay to strengthen the distribution network to companies in the surrounding area, such as the Abanto-Zierbena Technology Park, which will help them boost their competitiveness. Similarly, it will strengthen the electrical power supply to the area's urban sites. Red Eléctrica expects the work to be completed in the first four months of the year.

On the other hand, a second extension to the substation is in its final processing stage. This is another position, in this case a demand connection, for the supply of a large industrial consumer via the transmission grid. With this development, Red Eléctrica is facilitating the activity of new projects that are propelling the process of reindustrialisation and electrification forward in Gipuzkoa and Euskadi.

Red Eléctrica will be investing almost 3 million euros in these extensions that are included in the current Electricity Planning, approved by the Council of Ministers and binding for the company.
